The CIC will groom aspiring entrepreneurs and innovators by offering a platform that promotes original thinking and impactful product development.

Indraprastha Institute of Information Technology Delhi (IIIT-Delhi) and I-Hub Foundation for Cobotics (IHFC) — the Technology Innovation Hub of IIT Delhi — have joined hands to establish a Co-Innovation Center (CIC) at the Centre for Intelligent Product Development (CiPD) at IIIT-Delhi. This initiative is designed to foster innovation, technology, and entrepreneurship among the youth of India.

The newly established Co-Innovation Center is part of a broader vision to nurture innovation and technological advancement among India's young generation. These centres aim to groom aspiring entrepreneurs and innovators by offering a platform that promotes original thinking and impactful product development. It also emphasises on indigenous research and the creation of deep-tech products, aligning with national missions such as Viksit Bharat and Aatmanirbhar Bharat.

CiPD and IHFC aim to inspire young minds to innovate and explore novel ideas in technological research and their translation into viable products through this effort. The initiative aims to be a step towards empowering India's youth and equipping them with the tools to create globally competitive solutions.
